

# Meet the International Space Experts

**13/11/2024 - 16:00-17:30**

**Aula Convegni, Faculty of Engineering, University of Tor Vergata, Via del Politecnico, 1, 00133 Rome RM**

Every student and young researcher is invited to share in the excitement of scientific discovery and space exploration through unique opportunity to interact with international space experts from the International Space Life Sciences Working Group (ISLSWG) and the International Microgravity Strategic Planning Group (IMSPG).

With an eye to the growth of international cooperation, the ISLSWG aims at strengthening space research in the field of the Life Sciences: from microbiology to astrobiology, from plant science to human physiology and biomedicine. The objective of the IMSPG is to coordinate hardware construction and utilization amongst all the planning group members for the science disciplines areas of biotechnology, combustion science, fluid physics, fundamental physics and materials science. In recognition of the reality that the resources of individual agencies and nations are insufficient to carry out vigorous research programmes, both groups develop international strategic plans to increase the effectiveness of the collaboration among scientists around the world.

Hosted by the Italian Space Agency (ASI), this meeting will see contributions from international space agencies that participate to ISLSWG and IMSPG, which include NASA, the European Space Agency (ESA), the Canadian Space Agency (CSA), and the Japanese space agency (JAXA). These international experts will talk about the international landscape of space research and illustrate the resources and career opportunities for students and young scientists.

**Organising committee:** Bellucci Micol, Del Bianco Marta, Piccirillo Sara, Pizzarelli Marco, Stangalini Marco.
